

# Neural network & Deep learning

- Neural networks, a beautiful biologically-inspired programming paradigm which enables a computer to learn from observational data.
- Deep learning, a powerful set of techniques for learning in neural networks.
- Neural networks and deep learning currently provide the best solutions to many problems in image recognition, speech recognition, and natural language processing.

Table of content:

- Deep Learning Overview
- Installation Tips: Using 'pip install' instead of 'conda install'
- TensorFlow library Installation and Sample Program to Test
- Keras Installation and Switching Theano and TensorFlow Backends
- Explaining Multi-Layer Perceptron Concepts
- Explaining Neural Networks Steps and Terminology
- First Neural Network with Keras
- Explaining Training and Evaluation Concepts
- Pima Indian Model
- Coding the Pima Indian Model
- Pima Indian Model - Performance Evaluation - Automatic Verification, k-fold Validation, Hyper Parameters
- Understanding Iris Flower Multi-Class Dataset
- Developing the Iris Flower Multi-Class Model
- Understanding the Sonar Returns Dataset
- Developing the Sonar Returns Model
- Sonar Performance Improvement - Data Preparation - Standardization
- Understanding the Boston Housing Regression Dataset
- Developing the Boston Housing Baseline Model
- Boston Performance Improvement by Standardization, Deeper Network Tuning, Wider Network Tuning
- Save & Load the Trained Model as JSON File (Pima Indian Dataset) - Part 1
- Save and Load Model as YAML File - Pima Indian Dataset
- An Introduction to Checkpointing
- Checkpoint Neural Network Model Improvements
- Checkpoint Neural Network Best Model
- Loading the Saved Checkpoint
- Plotting Model Behaviour History - Introduction
- Dropout Regularization - Visible Layer, Hidden Layer
- Learning Rate Schedule using Ionosphere Dataset
- Introduction to MNIST Handwritten Digit Recognition Dataset
- Downloading and Testing MNIST Handwritten Digit Recognition Dataset
- MNIST Multi-Layer Perceptron Model Development
- Convolutional Neural Network Model using MNIST
- Convolutional Neural Network Model using MNIST

- NHCW format for training as well as prediction
- Large CNN using MNIST
- Load and predict using the MNIST CNN Model
- Introduction to Image Augmentation using Keras
- Augmentation using Sample Wise Standardization
- Augmentation using Feature Wise Standardization & ZCA Whitening
- Augmentation using Rotation and Flipping
- Saving Augmentation
- CIFAR-10 Object Recognition Dataset - Understanding and Loading
- Simple CNN using CIFAR-10 Dataset
- Train and Save CIFAR-10 Model
- Load and Predict using CIFAR-10 CNN Model
- SOURCE CODE AND FILES ATTACHED
